### VALUE OF DYNAMITE.

The Many Useful Purposes Which It Serves

Haumless and Safe to Handle of Precutions Are Taken - floth Heat and Percussion Needed to Explode H.-Methods of Manufacture.

Dynamite is a name that, to the mapority of people, is synonymous with murder, ruin and anarchy. In reality it is a very safe and useful commodity when properly handled, and will not xplode except under peculiar condi-ions. When a match is applied it will nerely burn and sizzle as the ordinary red fire does, says the Providence Jour red are does, says the Providence Jour-nal, and ninety-nine times out of a hundred it may be thrown from the top of a building without doing any harm. To explode the substance there must be the heat and concussion com-bined, and this can be obtained only by the use of the dynamite cap or falmin-te of mercers, discharged either he ate of mercury, discharged either by a lighted fuse or by the passage of an electric current.

The explosive substance Itself is a lant a pound weight, and held in not-low paper cylinders eight inches long and one and a quarter inches indiame-ter. For shipment these sticks are put up first in ten-pound packages, and then five of these packages are placed in a strong wooden case, and in that bulk they are sent out from the facto-ries to the selling agents. It is not ries to the selling agents. It is no brought here by train, and neither is ordinary gunpowder, for that matter, because none of the railroads which run freight lines in Providence will earry any kind of explosives. But the dynamite is brought as far as Acton, Muss., in the freight cars, and then parried from there in four-horse teams views of things hence their acceptance
